## Introduction to the Great Lakes: Brainstorm

The Great Lakes Basin is a part of Earth's biosphere and is home to many aquatic and terrestrial ecosystems and their inhabitants, including us! During this school year, we will be learning about principles of chemistry and looking at the role that they play in the world and environments around us. Because we all live and work in the Great Lakes Basin, we are going to talk frequently about how our actions and the chemical processes that occur around us affect the Great Lakes.

For homework tonight:

Use the space below to brainstorm five things that you know (or that come to mind) when you think about the Great Lakes.

---

---

---

---

---

Now use the rest of the space below to come up with three questions that you might have about the Great Lakes.
