

Name: _____

Date: _____

Adopt-An-Element: PART 2

In addition to answering the questions in packet, you must also make a model of one atom of your element that you will present to the class.

The model can be made of anything you want, but it must:

1. Be portable, as in you need to be able to get it to school.
2. Be clearly labeled and contain all of the necessary particles
(ie: protons, neutrons, and electrons)
3. Represent the arrangement of the electrons on their appropriate energy levels.

Be Creative and Have Fun!
